Brief Summary:

Stocks attempted to make some progress advancing further off the March lows last week but much of that progress was given back on Thursday and Friday, finishing the week basically flat. Risk Appetite continues to move lower but we have the start to a rising trend in short-term breadth. The Market Health Report (MHR) has risen to a multi-year high and we advance into April, which has historically been a bullish month for U.S. stocks. The February highs in the S&P 500 and the 100-day MA remain the focus of buyers, above that level and they have a clearer path to new highs but if we drop back under the 200-day MA then the weight of the evidence may slide back to the 'counter-trend bounce' group and we see stocks slide further. We still have over 30% of large cap stocks down over 20+% and barely half of equities are above their 200-day moving average.

From a sector viewpoint, the preference seems to be for defensive stocks, which are showing stronger signs of internal improvement. So much so, that over 75% of utility stocks have "overbought" momentum based on the RSI, condition that often leads to at least a minor pullback in the sector.

Bonds continue to be one of the most hated assets, and the latest COT data adds evidence to this, with Large Traders dropping their net position to a multi-year low. Contrarians may find interest in bonds at this stage, with the market pricing in 'peak hawkishness' by the Fed, sentiment towards bonds has rarely been lower than it is today.

VOLATILITY: VRT

VRT remains below its signal threshold but remains at 24 during all of last week with certain components meeting their threshold levels.

VOLATILITY: TOP & ENVIRONMENT

VIX continued lower last week with a slight uptick at the end of the week and how moved back into a Low Volatility Environment.

MARKET HEALTH REPORT

The Market Health Report (MHR) finished on Friday at +10, its highest reading in several months. All five categories are at or above 0. If equities can regain the February highs, there appears to be good support from internals to continue higher but I'm keeping a close eye on that February levels.

BULLISH CONFIDENCE SCORE

The Bullish Confidence Score remains at +5.

RISK APPETITE RATIO

Below is a table of 18 gauges of risk appetite such as offense vs. defense sectors, foreign markets vs. domestic, small vs. large cap, lumber vs gold, high beta vs. broad market, high yield debt vs. Treasury debt, etc. The table shows each ratio's 1-year percentile going back the last 3-months (35 trading days). As the data improves, it turns green and as it declines it becomes red.

The average Risk Appetite Ratio percentile saw a move lower last week.

RISK APPETITE RATIO

The average of the 18 RARs moved lower to the 30th percentile last week. Following last week's decline, risk appetite continued moving lower despite the strength shown in major indices. SPX closed flat on the week but the average of the RARs is closer to the March lows than it is to the YTD high.

I wrote last week that I was watching 4550 and the 100-day moving average, we saw a good break above these levels mid-week, but Thursday and Friday were unable to finish the week above. We ended up finishing flat on the week, 4 points above the 100-day MA and back below the February highs. I discussed these key levels on Fox Business last week, noting that the battle would be fought between here and the 200-day MA for where we go in the next leg of price action. Should we regain 4550/Feb. highs then there's not much to hold back bulls from making a run back to 4800 and another new 52-week high. But if we dip further and lose that 200-day MA, then the drop in Risk Appetite will be confirmed, and bears may get a chance to take back control.

EQUITIES - SPX 3-MONTH HIGHS

We're building up a nice up trend in new 3-month highs in the S&P 500. Below we have the 3-month daily new highs, with a 15-day average. The average has begun turning up with the latest strength in large caps. This is a positive development for equities.

EQUITIES - BREADTH THRUST

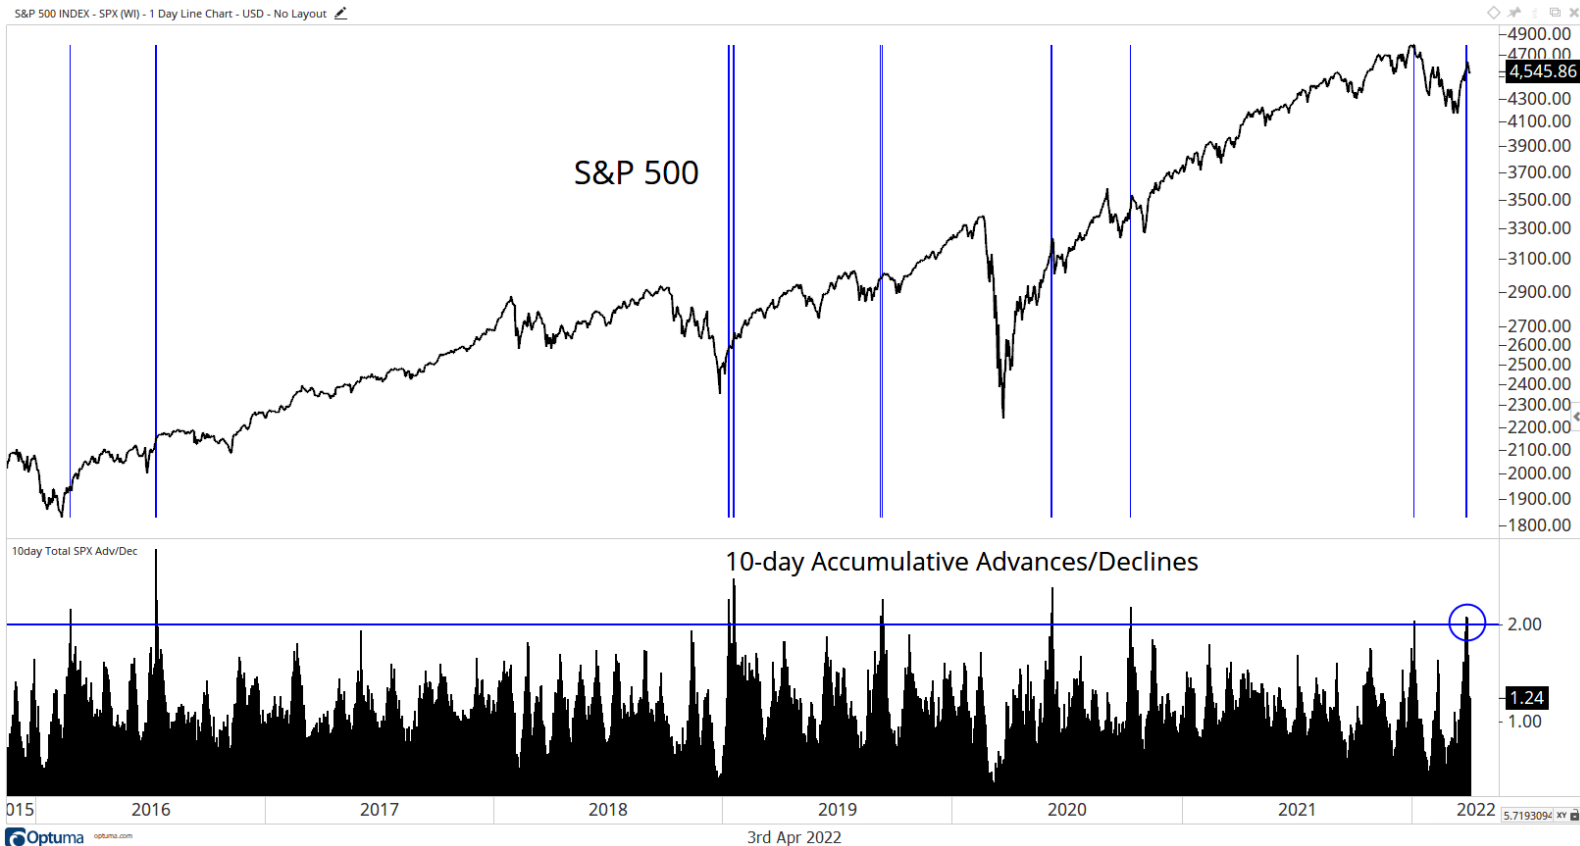

We had two breadth thrusts towards the end of last week, I'll show one example on the next page but first we have the Breadth Thrust Composite below. Two or more thrusts within a specific lookback period has been bullish for stocks, with just a few historical failed moves (most recent in 2015).

EQUITIES - BREADTH THRUST

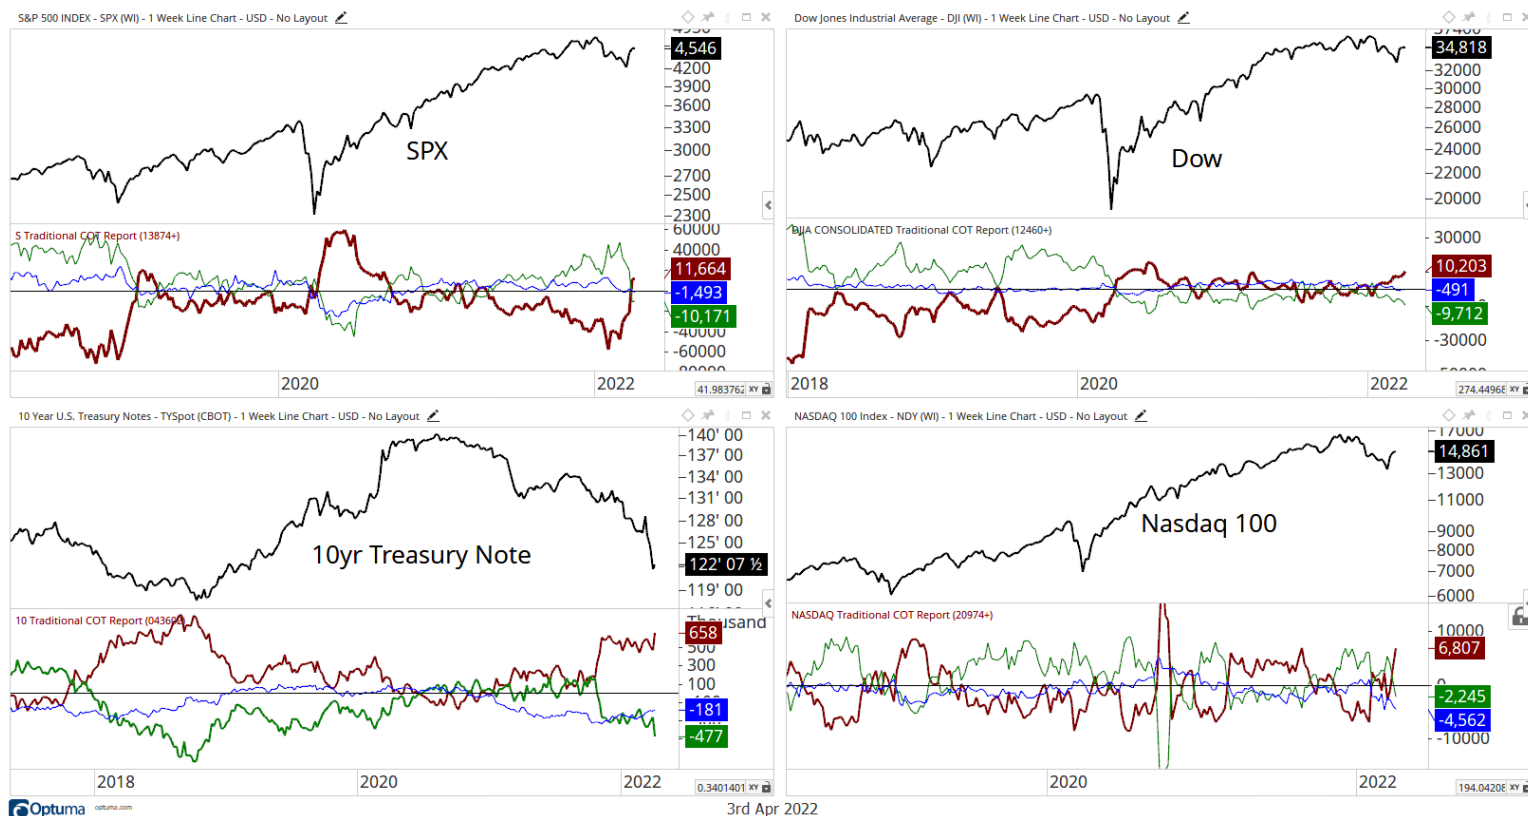

One of the breadth thrusts signaled last week that's part of the Composite is the 10-day accumulative total of advances/declines. This takes the total number of advancing large cap stocks over 2 weeks divided by the 10 day total of declines. When this ratio hits 2:1, that signals a thrust, a sign of strong price action. One observation about this type of thrust is that it also often is immediately followed by a pullback (as observed on the chart below). After this kind of price move stocks often need a 'cooling off' period but they often are short-term in nature.

EQUITIES - EQUITY COT

Commercial Traders (dark red lines) continued to add to the net-long positions in S&P 500, Dow, and Nasdaq 100 futures. This is offset by the strong lack of interest by Large Traders (green line) which are often hedge funds and large institutions, which continue to shed long exposure in equity index futures.

EQUITIES - CYCLICAL VS. DEFENSE

Similar to the Risk Appetite chart shared earlier, the relative performance of Cyclical Stocks vs. Defensive Stocks has failed to hold its initial burst of strength. Defensive stocks have been outperforming and are near their YTD highs. Meanwhile, the recent poor performance in transport stocks has dragged down the Cyclical basket. In the sector portion of the letter we can get an even better look at the strength in defensive sectors.

Cannabis stocks have been an interesting theme for the last 12-24 months, but the stocks have had poor performance. This is largely due to the gating off institutions being able to buy them, putting downside pressure on shares. MSOS, the ETF that represents U.S. cannabis companies has risen off its low but has yet to break above the 50-day MA, an area that keeps drawing in sellers. Many traders are looking for a bottom in this space, but we must take it one step at a time. First, the break above the prior low (blue line) is a good sign, next the 50-day MA and then the 100-day MA need to be taken out. The latest news of the SAFE Act being passed in the House is bullish but there's a long road for this space. Nonetheless, the long-term prospects are interesting to say the least.

VOLATILITY - VVIX

I've shared a version of this chart several times when VVIX (Volatility of the VIX) has gotten back to 145, which has been a bullish signal for equities. I last noted that VVIX had fallen back near 105 which had been a recent low-end of its range. VVIX strengthened slightly last week, moving up to 112 and shows some potential expectation that volatility (i.e. VIX) could expand. I do think volatility looks cheap around 20 and while we don't have a VRT signal, I wouldn't be surprised to see a higher VIX in the short-term. Again, this isn't based on a Thrasher Analytics model, just my personal observation.

HEDGE FUND STOCKS

A new section of the report I'll be sharing in the new year will be looking at the most important stocks to hedge funds.

Using the Thrasher Analytics Mean Reversion Indicator (TAMRI), I've sorted the stocks by their combined (Absolute & Relative) score, showing the 1st and 4th quartiles. These are not buy and sell recommendations. These lists show stocks that have potential to mean revert higher (when the TAMRI is low) or revert lower (TAMRI is high). I've also included the 1-year z-score of each stock.

This can act as a great source of idea generation of stocks that hedge funds may be active buyers or sellers in the coming weeks. I'll provide an updated list each week.

Update: The list of hedge funds stocks has been refreshed to reflect new positioning.

SECTOR - BREADTH

I think this look at sector breadth provides a lot of great insight, which is why I've been sharing it most weeks. Note the latest trends in the data between the 'offensive' and 'defensive' sectors. Clear strength showing up in defensive sectors (XLU, XLRE, XLP, & XLV) - all of which have at least 55% of their stocks trading above the 200-day moving average. Meanwhile, Only XLE in the 'offensive' group has at least half of their stocks above the long-term average and many of these sectors saw moves lower in their breadth readings. It appears while investors are showing interest in equities, it's more towards defensive corners of the market.

SECTOR - UTILITIES

Defensive sectors have been so strong in fact, Utilities now has over 75% of its stocks with an RSI over 70, suggesting many stocks are 'overbought'. Historically when we have over 70% of XLU stocks with an RSI over 70, the sector has pulled back, working off that stretched momentum condition.

COMMODITIES - BREADTH

Several commodity markets saw weakness last week and the % that are still trading above their respective 50-day average dipped to 66.7%. I still believe commodities are going to be a hot topic this year, few things move in a straight line for long and trends require some digestion which appears to be happening in several commodities right now.

FIXED INCOME - TREASURY COT

Is there anything more hated right now than Treasury bonds? Based on the latest Commitment of Traders (COT) data, the answer is no. Large Traders have taken their net-position to a multi-year low, sending the percentile to the lowest level since the last time bonds bottomed out. As the chart below shows with blue dots, when Large Traders give up on bonds, they resulting performance has been bullish for Treasury's. There's obvious counterwinds to a rise in bonds with the Fed expected to hike rates 50bps in the next 1-2 meetings, but could that be priced in at this point? Surely the hikes won't be a surprise and the 'pain trade' likely is a move higher, at least a counter-trend bounce, in bonds. All the headlines right now are about the inverted yield curve, can sentiment get any more bearish bonds?

TA MEAN REVERSION INDICATOR

Below are short-term, intermediate, and major signals produced from improvements in the Thrasher Analytics Mean Reversion Indicator. Please refer to the summery PDF in the newsletter archive on the website for more details.

New TAMRI Signals:	
Blue (short-term):	-
Orange (intermediate):	-
Green (major):	-
