FORECAST SYMPOSIUM

Gainbridge Fieldhouse

Tuesday, January 24th, 5 - 10PM

Andrew
Thrasher

Keynote
Cliff Asness

I have the great honor to be one of two speakers at the upcoming CFA Society of Indianapolis Forecast Symposium later this month. The event will be taking place at the Gainbridge Fieldhouse in downtown Indianapolis, the home of the Indianapolis Pacers.

Ciff Asness of AQR will be the keynote speaker and I can't wait to hear what he has to say as we move into the new year! I'll be discussing my paper that won the Charles Dow Award, Forecasting a Volatility Tsunami as well as how I use technical analysis as a Portfolio Manager.

Brief Summary:

Another slow week with markets seeing a marginal drop lower to finish off one of the worst years of performance. Volatility dispersion has continued to narrow and we're nearing levels that could raise the risk of a volatility spike.

While we didn't see major changes in price action, I do think there's an interesting development in one of the most hated corners of the equity market as we shift into a new year. Mega Cap growth stocks are seeing a test of the November low with a bullish divergence in both sentiment and momentum. There's also a bullish divergence in the drawdown data for the Nasdaq 100 as well as the DSI data for the Nasdaq while the index tests its prior lows. These stocks have been unloved nearly the entire year, so if they were to start to recover, we could see a notable chase after most investors shed their exposure throughout 2022.

This week we'll get a look at December jobs data as well as the latest ISM Manufacturing report and the release of the December FOMC meeting minutes. There's no FOMC meeting this month, so the markets will try and see if there's a read-through into what the Fed is planning for the February meeting.

VOLATILITY: VRT

VRT fell to 24 at the end of last week with some of the indicators coming off their signal levels.

VOLATILITY: TOP & ENVIRONMENT

VIX remains in a Low Volatility Environment.

CBOE S&P 500 Volatility Index - VIX (CBOE) - Daily Bar Chart - USD - No Layout

VOLATILITY - CURVE

The VIX futures curve remains in contango with the backend of the curve still below the 20th percentile.

Daily - Watch List - No Layout

VIX Minus VIX - VIX-VIX (Custom Codes) - Daily Line Chart - USD - No Layout

VOLATILITY - DISPERSION

Last week I discussed the narrowing in dispersion for the composite of VIX for some of the major equity indices. This week, I want to focus more on just the VIX Index (S&P 500 Volatility). Standard deviation for spot VIX has continued to decline with VIX having gone basically nowhere for the last month. At the start of January, the 20-day lookback period will 'drop off' the lowest close in the last several months (dotted blue box at the start of December), which will cause a material drop further in standard deviation. This lends itself to a heightened risk of volatility spike if the narrowing of dispersion continues. I will continue to monitor this closely and send out any mid-week updates if I deem it warranted.

Please be sure to check out the Maestro Model Summary PDF in the Archive on the website.

The Maestro Model weakened to -7, hitting -8 earlier in the week. The S&P 500 is now less than 5% from its June low as buyers were unable to maintain control into year-end.

MAESTRO MODEL - CATEGORIES

Trend/Momentum and Sentiment/Volatility both moved lower by Friday of last week.

SENTIMENT SCORE

Energy saw an uptick in breadth thrusts last week, now at 3. The average stock sentiment in the Utility sector is elevated, at 0.466.

RISK APPETITE RATIO

Below is a table of 17 gauges of risk appetite such as offense vs. defense sectors, foreign markets vs. domestic, small vs. large cap, lumber vs gold, high beta vs. broad market, high yield debt vs. Treasury debt, etc. The table shows each ratio's 1-year percentile going back the last 35 trading days. As the data improves, it turns green and as it declines it becomes red.

The average Risk Appetite Ratio percentile is at the 42nd percentile.

Risk Metric	-35	-34	-33	-32	-31	-30	-29	-28	-27	-26	-25	-24	-23	-22	-21	-20	-19	-18	-17	-16	-15	-14	-13	-12	-11	-10	-9	-8	-7	-6	-5	-4	-3	-2	-1	Current

RISK APPETITE RATIO

Risk Appetite didn't move much last week, finishing the week at the 42nd percentile.

Another slow week as markets finished up trading in 2022. The SPX finished just under 3840 and under the 50-day moving average. Santa has either taken the year off or is extremely late this year, but stocks finished 2022 with one of their worst performances. Buyers have defended 3800, we'll see if that continues into January.

EQUITIES - BREADTH THRUSTS

I've added an add'l section of the breadth thrust composite chart, titled Primary Long-Term Thrusts. These are the handful of thrusts that are in the original composite that have the best track record and only have the highest bar to clear to signal. The original composite is still what 'feeds' the breadth category of the Maestro Model.

Thrust count sits at +1.

EQUITIES - BREADTH

Below is a table showing the changes in breadth data over the last 35 days. This provides insight into whether bullish or bearish data is improving or declining.

	35 Days Ago	30 Days Ago	25 Days Ago	20 Days Ago	15 Days Ago	10 Days Ago	5 Days Ago	Current

EQUITIES - ABOVE KEY LEVELS

Below is a chart that shows the percent of S&P 500 stocks that are above their respective June 16th level or August 16th level. These two dates were they key bottom in the summer and the latest swing high in August. While the S&P 500 is less than 5% above the June 16th level, nearly 70% of stocks are still holding above their own. This is a good sign that we aren't seeing a major breakdown of stocks making lower lows under that summer level. We'll see if that continues to hold should the index continue to decline but as of right now, stocks appear to be holding up okay.

EQUITIES - NASDAQ DRAWDOWN

The Nasdaq 100 has fallen back to its prior low, but the drawdown data has greatly improved. The last time the Nasdaq was at this price level the average stock was down over -38%. As of Friday, the average drawdown was "just" -29.5%. This is still a big number but at least it's not as bad as -38%. This suggests that stocks are holding up better than the index is suggesting.

EQUITY - GROWTH VS. VALUE

With interest rates rising again at the end of the year, growth stocks have taken another punch and the ratio of Growth to Value has fallen just under its prior low. This is taking place after the latest strength in the ratio failed to break above the May low. Turning the focus to momentum, the Volatility Adjusted Momentum indicator is at -38 after being near -70 in November. This potential bullish momentum divergence may signal a failed break down in the ratio, which would favor a possible bounce in growth stocks.

Sticking with our focus on growth stocks. What's been one of the most hated corners of the equity market this year? Mega cap stocks and specifically mega cap growth stocks. This makes the chart below that much more interesting. Sentiment towards mega cap growth has been awful and understandably so, as the stocks have gotten slaughtered with some still down -50% or more. However, the MGK ETF, similar to the Growth vs. Value ratio referenced on the prior page, has fallen to its November low and has a bullish momentum divergence. But we also have a divergence in the sentiment data. Shown on the middle panel is the Factor Sentiment Score for MGK, this compares the Factor ETF against a large group of other equity factors to produce a sentiment score similar to the sentiment scores for sectors shared in each week's letter. Here we can see once again that sentiment for mega cap growth stocks is extremely low, having dropped under 0.1 but it is still making a higher-low relative to the level breached in November.

If equities were to stage a January rally, mega cap growth could see at least a bounce from here. But if it starts breaking back below that November level, then sellers may not be finished with these stocks and more blood gets shed from the growth factor to start 2023.

EQUITIES - SENTIMENT

Below is a composite of the sector sentiment scores, grouped by Defense or Offense. This shows which sectors are seeing stronger sentiment. When the spread is below zero, Defensive sectors have a stronger collective sentiment score and when above zero, Offense sectors have better sentiment.

Currently, the trend has been moving lower as Defensive sectors and their sentiment score of 47 outpaces Offense sector sentiment of 34.6. Divergences can be insightful when they develop, as well as when the spread is above -1 as the market makes a new 1-month low (shown by the green arrows).

EQUITIES - INDUSTRY PERFORMANCE

Here's a look at the worst and best performing large cap industries for 2022. The top of each column is not likely a big surprise with energy and oil/gas stocks leading the group and cars and internet retailers at the bottom.

SECTOR - BREADTH 200-MA

Energy remains the strongest sector based on % of stocks above the 200-day MA.

FUND FLOWS

Not many would have guessed that Health Care would have seen the biggest inflow in 2022 while energy finished the year with a net YTD outflow.

COMMODITY - GOLD

I've been discussing the setup in gold COT data for what feels like months now. I had been focusing on the net-short in Money Managers that has historically led to strong price action in gold prices when that short comes off. The trader group has been working off that net-short and moving further net-long in recent weeks. Gold prices have risen steadily off prior support following a failed break under \$1700.
