Brief Summary:

The equity market remains week with a change in trend for the S&P 500, joining many of the sectors as being in defined down trends. The large cap index has fallen 10%, but I believe, based on the data, that this presents an interesting opportunity for a possible bounce in stocks. Since 1980, the 18 prior -10% drawdowns from 52-week highs saw markets rally 83% of the time 6-months later. While 48.7% of stocks are down over 20%, some measures of capitulation suggest we could see a 'washing out' of equities in the near future. The Aggressive Buy Signal in the Maestro Models, along with extremely low readings of sentiment (10% bullish for the S&P 500 for example), set up for an oversold counter-trend rally as we move into the seasonally favorable period of the calendar year.

This week we'll get earnings from Apple on Thurs. and ISM on Weds. morning and FOMC announcement in the afternoon, on Fri. the October jobs report will be released, all of which should give the market ample kindling to bounce higher or see a continued sell-off.

VOLATILITY: VRT

VRT remains at zero as VIX stagnates around 20.

VOLATILITY: TOP & ENVIRONMENT

Two more VIX Peak signals as spot VIX popped above 23 and then pulled back. We also closed out the week with VIX back in a Low Volatility Environment.

VOLATILITY - CURVE

The VIX futures curve has flattened on the front end, with 9-day just slightly above 30-day.

Daily - Watchlist - No Layout

Name	Last	1yr %Tile	Ticker
CBOE S&P 500 Short Term Volatility Index	21.36	0.5327	VIX9D
CBOE S&P 500 Volatility Index	21.27	0.5800	VIX
CBOE S&P 500 3-Month Volatility Index	22.27	0.5355	VIX3M
CBOE Mid-Term Volatility Index	23.65	0.4934	VIX6M
CBOE S&P 500 One-Year Volatility Index	24.48	0.4083	VIX1Y

VOLATILITY - SEASONALITY

We are now at the second peak in VIX seasonality for the uptrend that's historically taken place from mid-summer until November. You can see on the chart below that volatility has done a fairly good job tracking its seasonal trend and if it continues to do so, should be making a high this week and drifting lower into year-end.

Please be sure to check out the *Maestro Model Summary PDF* in the Archive on the website.

The Maestro Model moved lower again this week to -16 and on Thursday got an Aggressive Bullish Signal. This signal is generated when the Index is making a new low, but the Maestro Model is making a higher low and the Capitulation Gauge is at least +2. As we can see from the bear market in 2022, Aggressive Bullish Signals can be followed by short-term counter-trends higher but not necessarily mean the final low has been put in, we look to the actual Model to flip back to positive for that degree of confidence, which by construction, will happen after just the potential final low has been made.

MAESTRO MODEL - CATEGORIES

Trend/Momentum and Breadth were the same by Friday, but Sentiment/Volatility fell 2 points to -3.

SENTIMENT SCORE

Interesting to see Utilities now holding the highest sentiment score followed by former leaders, XLC and XLK. XLK got a bullish sentiment signal this week along with 5 bullish divergences being registered. XLC also got a bullish signal and had several divergences registered as well.

RISK APPETITE RATIO

Below is a table of 16 gauges of risk appetite such as offense vs. defense sectors, foreign markets vs. domestic, small vs. large cap, lumber vs gold, high beta vs. broad market, high yield debt vs. Treasury debt, etc. The table shows each ratio's 1-year percentile going back the last 35 trading days. As the data improves, it turns green and as it declines it becomes red.

The average Risk Appetite Ratio percentile is at the 47th percentile.

HIGH & LOW REL. STRENGTH LIST

Each week will take a look at the stocks making new 6-month highs (on the left) and lows (on the right) relative to the S&P 500. This list will be of large cap stocks and grouped based on their sector. If it's making a 6-month AND a 12-month relative high (or low) then it'll be shown in green (or red) and if it's a new 12-month absolute new high (price) then it will be in bold. This type of scan be useful in seeing what stocks are showing strength as well as which sectors have the most stocks making relative gains. We can also get insight into the breadth of the market based on whether there are more new relative highs or lows each week. I hope you find this useful as a source of idea generation and a unique view on the broad health of the market.

EQUITIES - S&P 500 DAILY

The S&P 500 closed under several key price levels last week, continuing to hold under the 200-day MA and under the Q4/Q1 consolidation level. There's not much left now as far as support for the large cap index until we get back to 4000 or the 200-week moving average, currently just above 3900. Momentum, however, is now 'oversold' for the second time in two months. This could draw in some dip buyers. The drawdown has also now hit 10%, which I believe could also draw in buyers, more on this topic later in the letter.

EQUITIES - BREADTH THRUSTS

I've added an add'l section of the breadth thrust composite chart, titled Primary Long-Term Thrusts. These are the handful of thrusts that are in the original composite that have the best track record and only have the highest bar to clear to signal. The original composite is still what 'feeds' the breadth category of the Maestro Model.

Thrust count is at zero.

EQUITIES - 3-MONTH LOWS

As of Friday, there was a net 67% of stocks having made a new 3-month low in the last month, the lowest figure since the 2022 low. I've plotted blue dots on the chart when we've gone under 66, each time drawing in at least a short-term bounce (in the case of the GFC) or a major low.

EQUITIES - MA BREADTH

Just 10% of large cap stocks are still above their intermediate 50-day MA and 23.7% are above their long-term average. It's fair to say, few stocks are still left standing as far as up trends are concerned and we're nearing a 'wash out' type level in the breadth department.

EQUITIES - 20-DAY LOWS

One unusual statistic for the current down trend is the lack of major expansion in new 20-day lows. We've been meaningful above 50% just once and while the S&P was at a 2-month low on Friday still only 36% made a new 20-day Low. When the Index was at a multi-month low and less than 40% of stocks were at a 1-month low, we've seen several counter-trend rallies develop.

EQUITIES - OVERSOLD BREADTH

Last week I wrote how we didn't see a major increase in stocks becoming oversold, that changed on Friday as we hit 25% of stocks with an RSI under 30. not quite getting the net number to -25% but very close, which has been a positive for the Index in the past.

EQUITIES - SENTIMENT & BREADTH

As of Friday, the DSI for the S&P 500 was at 10%, the lowest level of sentiment since the low last year and less than 25% of stocks are still holding above their long-term moving average. Combined, this has been historically a contrarian bullish sign of stocks 'washing out' from a sentiment and breadth perspective as shown on the chart below.

EQUITIES - AVERAGE PERFORMANCE

We went from 43.9% last week to just 38% of stocks this week that still have a positive YTD performance. While mega caps have been the strength for the bulk of the year, their average YTD performance is close to going negative as well, at 2.13%.

S&P 500 INDEX - SPX (W) - Daily Line Chart - USD - No Layout

EQUITIES - 10% DRAWDOWN 1

We are now down -10.28% in the S&P 500, with many stocks down much more than this. -10% and -20% are psychologically important drawdown levels and often cause traders to react when these thresholds are hit. When first coming off a 52-week high, 10% drawdowns have often been bought with a few notable exceptions. We saw a brief bounce in 2007, a bounce in 2022 and of course further downside during the Covid Crisis that was quickly reversed a few weeks later. The next page will look at the statistical data of this study.

EQUITIES - 10% DRAWDOWN 2

Since 1980, there have been 18 instances of the S&P 500 declining 10% from a recent 52-week high. Six months later, the Index was higher 83% of the time with a median return of 10.4%. Note that while we often saw the start to a bounce once the -10% threshold was hit, many times a test of that first low was often made sometimes undercutting it by 2-3%, creating a double bottom or a lower-low with a momentum bullish divergence getting setup. This of course isn't a requirement of the market, but shows the historical roadmap of prior -10% declines from a recent 52-week high.

EQUITIES - DIVERGENCES

Systematically tracking bullish and bearish divergences in individual stocks to create a breadth-type indicator is one of the inputs to the Trend/Momentum model of the Maestro Model. Below is a look at some of that data. As of Friday, 51.3% of stocks have a bullish momentum divergence (a higher low in momentum when the stock is making a lower low in price). We don't see readings above 50% very often, below dots are shown on the chart for prior instances. We can see the first low in 2022, the Covid Crash, and the low in 2018 each were accompanied by just north of 50% of stocks with a bullish divergence like they do now.

The Trend Model for the S&P 500 (shown for SPX, NDX, and the major sectors at the end of each letter every week) has turned negative. Below is a long-term look at the trend model. As with any trend-based indicator, there are occurrences of whipsaw, but this model has done a good job at catching the bulk of up trends and minimize many periods that have shaken out other attempts at trend capture (Q1 2018 is a good example). While the trend is now negative on a systematic basis, based on the other data shared in the letter this week, I do believe there's a chance we could see at least a short-term bounce in the Index would likely cause some whipsawing in this trend model.

EQUITIES - SEASONALITY

As we close out October, here's an update to the 1-year seasonal pattern for the S&P 500. You can see that it's not that unusual to see late-October selling, that then setups for the bullish trend higher in November and December.

28th Oct 2023

EQUITIES - SECTOR SENTIMENT

With the improvement in sentiment for sectors like Utilities, the Defensive Sector Sentiment ticked above Offense Sentiment briefly last week before reversing on Friday.

ETF FUND FLOW

Below is a table with fund flow data through Thursday of last week.
