Brief Summary:

We put a close to 2023 with large cap equities putting in a strong performance, outperforming just about anything else that an investor may have added to a portfolio in search of diversification. While it was a holiday-shortened week (as is this week), equities inched higher, giving back a little ground on Friday but sit just under the prior all-time closing high. Breadth has remained strong, as has momentum. The largest concern in the market remains volatility and sentiment. The VIX has increased its correlation to the S&P 500, rising or falling with the equity index in ten of the last 21 days, a rare feat that's been accomplish just a handful of times in the last 20+ years.

The dollar has fallen back to its prior key support level that's helped define its trading range for much of 2023. Gold briefly broke out above the previously mentioned key price level but fell back below this week - frustrating commodity traders hoping for the shiny metal to glow once more.

This week, markets will be closed on Monday for New Year's and the major events that will draw attention will be the December jobs number that comes out on Friday as well as the ISM report and FOMC minutes that are released on Wednesday.

Another quiet week in equities which means a quiet week for volatility, VIX moved back to 12.5 while the VRT has held firm at 72.

CBOE S&P 500 Volatility Index - VIX (US) - Daily Line Chart - USD - No Layout

VOLATILITY: TOP & ENVIRONMENT

VIX is under 13 and remains in a High Volatility Environment due to the mean-reversion components of the model which are stretched to a historical high level.

31st Dec 2023

VOLATILITY - CORRELATION

The S&P 500 and the Volatility Index have moved together 10 of the last 21 days (7 of which were positive equity days). This development has only happened six prior times, as it's rare for equities and Volatility to have a positive correlation. Many of the prior occurrences saw a double digit rise in spot VIX, as shown on the chart below.

Please be sure to check out the Maestro Model Summary PDF in the Archive on the website.

The Maestro Model rose another 3 points from last week with an improvement in the Breath category.

MAESTRO MODEL - CATEGORIES

Breath ticked up to +6.

SENTIMENT SCORE

Real Estate again is top highest sentiment sector but was the fourth best performing sector on the week. Few changes in sentiment last week as markets went to sleep head of the New Year.

RISK APPETITE RATIO

Below is a table of 16 gauges of risk appetite such as offense vs. defense sectors, foreign markets vs. domestic, small vs. large cap, lumber vs gold, high beta vs. broad market, high yield debt vs. Treasury debt, etc. The table shows each ratio's 1-year percentile going back the last 35 trading days. As the data improves, it turns green and as it declines it becomes red.

The average Risk Appetite Ratio percentile is at the 62nd percentile.

Risk Metric	-35	-34	-33	-32	-31	-30	-29	-28	-27	-26	-25	-24	-23	-22	-21	-20	-19	-18	-17	-16	-15	-14	-13	-12	-11	-10	-9	-8	-7	-6	-5	-4	-3	-2	-1	Current

HIGH & LOW REL. STRENGTH LIST

Each week will take a look at the stocks making new 6-month highs (on the left) and lows (on the right) relative to the S&P 500. This list will be of large cap stocks and grouped based on their sector. If it's making a 6-month AND a 12-month relative high (or low) then it'll be shown in green (or red) and if it's a new 12-month absolute new high (price) then it will be in bold. This type of scan be useful in seeing what stocks are showing strength as well as which sectors have the most stocks making relative gains. We can also get insight into the breadth of the market based on whether there are more new relative highs or lows each week. I hope you find this useful as a source of idea generation and a unique view on the broad health of the market.

New 6-Month Relative Performance High List

					Total 6m RS Lows:					
New 12-month Absolute Low					3					
New 12-month Relative Low					3					

EQUITIES - S&P 500 DAILY

A quiet week for stocks with Friday seeing a slight tick lower in the final hours of trading to close out the week. The shortened trading week did see a move up in equities as we near the prior all-time closing high just under 4800. Traders are focused on a breakout at this level and with momentum holding up well, it's possible we see it. What bulls will want to see is that breakout hold while bears will push to get a failed breakout that could draw in some selling and nervous profit taking.

EQUITIES - BREADTH THRUSTS

I've added an add'l section of the breadth thrust composite chart, titled Primary Long-Term Thrusts. These are the handful of thrusts that are in the original composite that have the best track record and only have the highest bar to clear to signal. The original composite is still what 'feeds' the breadth category of the Maestro Model.

Thrust count is at +2.

EQUITIES - YTD PERFORMANCE

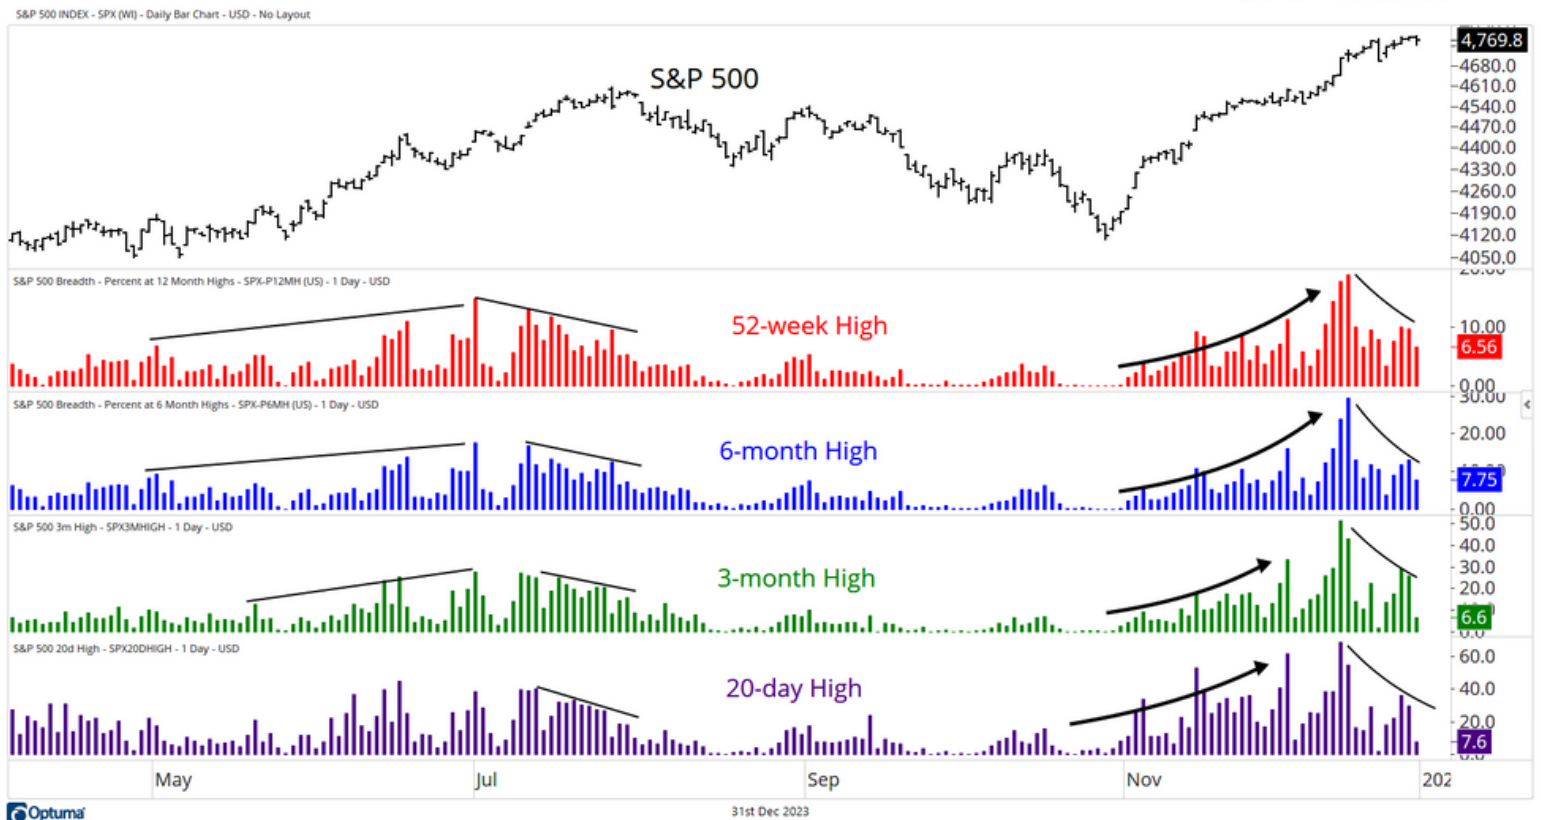

Large cap equities trounced any attempt at diversification in 2023. A nearly 10 point spread to even the second-best performing asset. An attempt to go outside the U.S. was punished with EAFE putting in almost half the work of domestic markets and emerging markets finishing in the single digits. A poor second half of the year hurt commodities which closed in the red, as did long-term bonds.

EQUITIES - NEW HIGHS

Last week I discussed the bullish setup of new highs across asset sizes. That continues to be the case but last week we did see the new high data cool off as volume dropped out of the market and most stocks stagnated as the Index drifted marginally higher. The lack of continued new highs across time frames isn't a major concern at this point being that it was a shortened week and year-end. We'll want to see these breadth gauges pick up back up in the coming weeks though.

EQUITIES - AVG PERFORMANCE

The S&P 500 is finishing the year up over 24%, but what's the performance of the average stock within the index? While we started the year and most of the summer seeing this number hold basically flat, as breadth broadened out in Q3 and Q4, the average 2023 performance for S&P 500 stocks is at 15%. 64% of large cap equities are finishing the year in the green, up from 40% back in March and near that level in October.

S&P 500 INDEX - SPX (W) - Daily Line Chart - USD - No Layout

EQUITIES - EFFICIENCY RATIO

In the Nov. 26th letter I discussed the Kaufman Efficiency Ratio (KER). Defining it as follows: “The more consistent the daily change in price over a period of time, the more “efficient” the trend. For example, if the S&P 500 rose 12 points over 12 days, that would be a reading of 1. This is a tool that can be used to evaluate the strength of a trend and look for extremes as well as divergences.”

Below is another look at the KER as it continues to rise and now is at a historically significant level. We last saw the KER at 0.54 was during the Jan. 2018 melt up that saw a VIX spike and quick -10% drawdown in the SPX. Before that, it was the 2010 pullback and then we’d have to go back to 1998. Needless to say, the market is acting *too* good! That’s odd to say, but another way to view the current price action as being too symmetrical, which is what feeds into this indicator. The green lines show when the opposite happens and things are too symmetrical on the downside, creating excellent buying opportunities. This suggests a pullback from current levels wouldn’t be the biggest surprise and matches what the VRT is suggesting, as VIX activity is also showing too high a degree of confidence and compliancy.

EQUITIES - FED LIQUIDITY

Liquidity saw a large pullback last week due to banks throwing more money at the RRP. This isn't entirely unusual at year-end, which we can see an example of back at the end of 2022 (red circles) when the same type of activity occurred and was quickly reversed at the start of the new year.

FOREX - U.S. DOLLAR

The USD has fallen back to the lower-end of its 2023 range, just above \$100. Does this level continue to act as support and begin to draw in buyers to the dollar, which wouldn't be welcomed by fixed income markets and could act as a headwind for equities as well. I'll be watching the dollar closely as we enter 2024.

EQUITIES - SECTOR SENTIMENT

Improvement in Defensive sentiment last week pushed the Spread lower but it's still holding positive.

ETF FUND FLOW

Below is a table with fund flow data through Thursday of last week.

Daily - ETF Flows - Fund Flows Layout

Name	Ticker	Net Flows YTD	Net Flows 1 Month	Net Flows 3 Month	1 Month Flow % of AUM
- Bond ETFs
