Brief Summary:

The S&P 500 advanced just over 1%, led by XLK, XLV, and XLC sectors with XLU, XLE and XLB lagging the most. Breadth continues to be a concern with fewer and fewer stocks able to keep up with the large cap index. No days last week saw more than half of large cap stocks outpacing the SPX and now the 20-day average of outperformance has reached prior levels that's led to Equal Weight outperformance in at least the short-term. On Weds. the Index made a new high but had less than 9% of stocks joining in making at least a 3-month high.

The VRT remains at signal level, which means the door remains open for a spike higher in volatility, but the spot VIX has yet to close above 14 on a weekly basis, a factor I've been keeping an eye on and discussed in greater detail in last week's letter. The Maestro Model produced an Aggressive Bearish Signal with the model making a negative divergence with the market.

This week we'll get a look at inflation data with CPI on Weds. and PPI on Thurs along with an FOMC announcement on Weds.

VOLATILITY: VRT

VRT remains at its signal threshold despite the pullback in spot VIX. For those new subscribers and a reminder to those that aren't, VRT signals remain 'active' until a material move occurs in VIX or VIX makes a 6-month low.

VOLATILITY: TOP & ENVIRONMENT

VIX remains in a Low Volatility Environment regime, but we do have a VRT signal shown by the black arrow.

VOLATILITY - CURVE

Curve remains in contango but there is a slight kink between 9- and 30-day vol with 9-day slightly above 30-day.

VOLATILITY - OBSERVATION

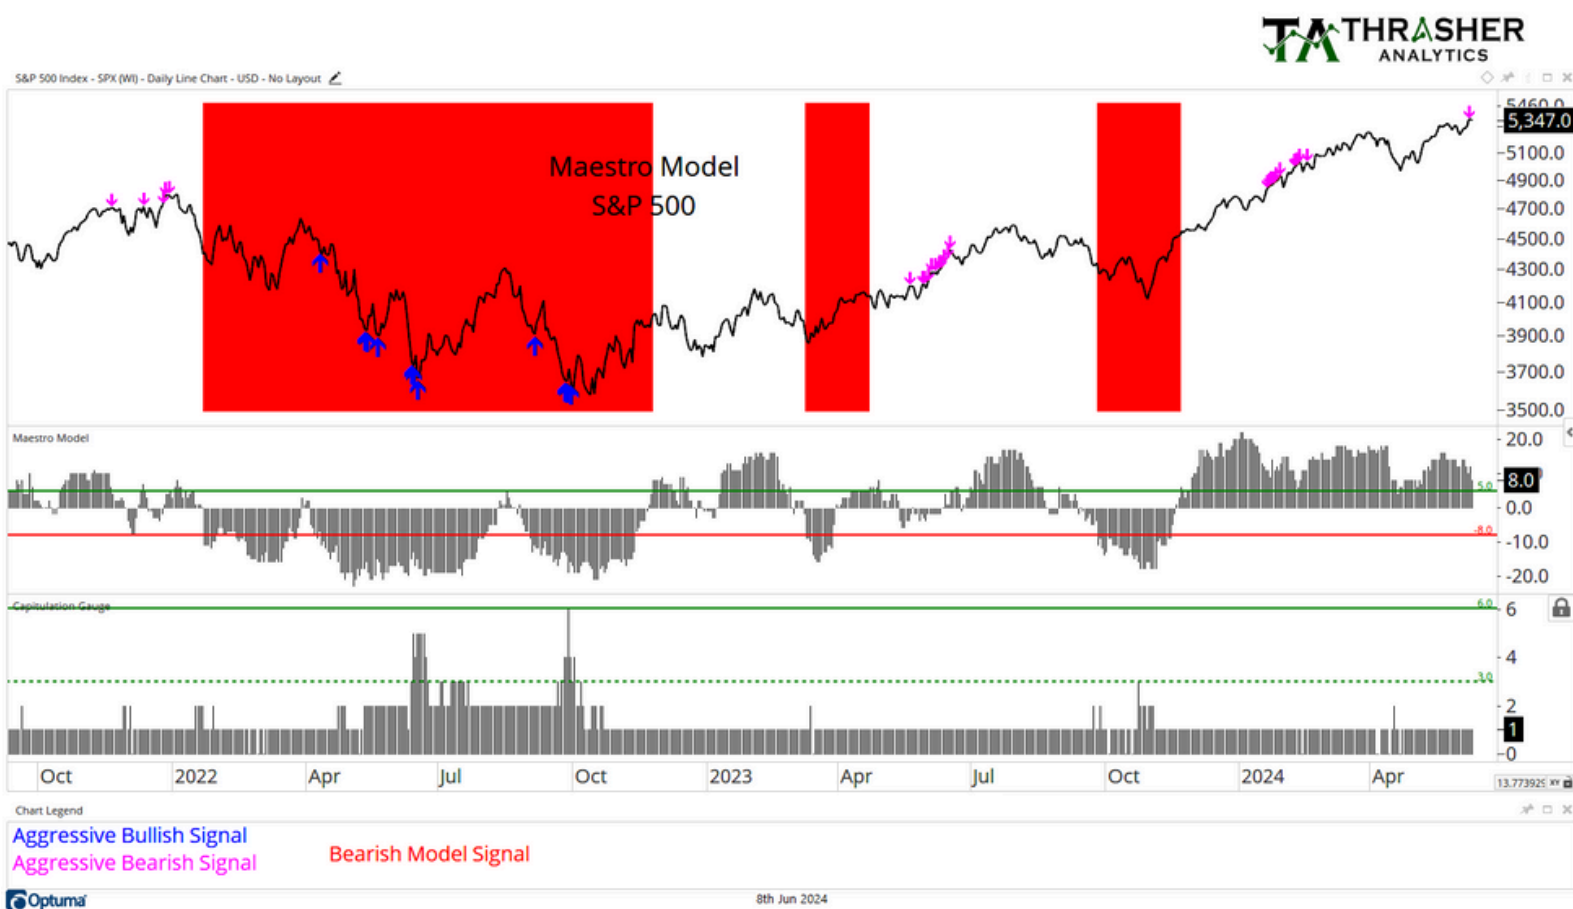

I shared the following chart on Twitter/X last week and want to provide additional detail in this week's letter. The below red lines show when the S&P 500 makes a new high, but the VIX is materially off its low by at least 5% and dispersion has contracted. This tells us that the VIX has begun to move higher in a tight dispersion period (based on my "Forecasting a Volatility Tsunami" paper). Since 2007 this type of setup has seen the Volatility Index move higher 60% of the time by an average change of 16.6% in the following couple of weeks.

Please be sure to check out the Maestro Model Summary PDF in the Archive on the website.

Maestro Model pulled back from +14 to +8 last week as a result of declines in sentiment/volatility and breadth categories. This has produced an Aggressive Bearish Signal which comes when the Maestro Model negatively diverges from the equity market. As the chart shows with prior pink arrows, these signals can cluster and are called “Aggressive” because they can mark timely peaks like in 2022 but also can fail like in the summer of 2023 and earlier this year when they were a few weeks early before the SPX saw a short-term decline.

MAESTRO MODEL - CATEGORIES

Both Sentiment/Vol and Breadth categories declined by 2 points.

SENTIMENT SCORE

Just two sectors saw sentiment increases last week, XLV and XLK with XLV moving to the top of the ranking by score.

Daily - Watchlist - No Layout

RISK APPETITE RATIO

Below is a table of 16 gauges of risk appetite such as offense vs. defense sectors, foreign markets vs. domestic, small vs. large cap, lumber vs gold, high beta vs. broad market, high yield debt vs. Treasury debt, etc. The table shows each ratio's 1-year percentile going back the last 35 trading days. As the data improves, it turns green and as it declines it becomes red.

The average Risk Appetite Ratio percentile is at the 51st percentile.

RISK APPETITE RATIO

The Average Risk Appetite Ratio dipped under the 50th %tile but finished at the 51st. The continued weakness in equal weight and small caps along with really anything that isn't AI-related has been a detractor from risk appetite ratios.

EQUITIES - BREADTH

Below is a table showing the changes in breadth data over the last 35 days. This provides insight into whether bullish or bearish data is improving or declining.

	35 Days Ago	30 Days Ago	25 Days Ago	20 Days Ago	15 Days Ago	10 Days Ago	5 Days Ago	Current

EQUITIES - S&P 500 DAILY

The S&P 500 advanced 1.32% this week, holding above the key price levels discussed last week. The new high comes with very little confirmation, including the daily 14-period RSI as shown in the chart below which currently sits under the prior high of 69.6. More about the RSI later in the letter.

EQUITIES - BREADTH THRUSTS

I've added an add'l section of the breadth thrust composite chart, titled Primary Long-Term Thrusts. These are the handful of thrusts that are in the original composite that have the best track record and only have the highest bar to clear to signal. The original composite is still what 'feeds' the breadth category of the Maestro Model.

Thrust count is at 0.

As I mentioned earlier, it's been quite a while since the 14-day RSI has gone above the 70 level. 68 days to be exact. Below is a chart showing the historical number of days the S&P 500 has taken between periods of being above 70. I've plotted green arrows when the Index hits a new 1-year high and it's gone over 60 days without RSI breaching 70. Some of periods were very timely to market turning points (1998, 2007, 2015, and 2018 peaks) with others marking near or at short-term minor counter-trends. This shows that it does appear the lack of strong momentum has mattered in the past to the market, we'll see if it does this time as well.

EQUITIES - 6-MONTH BREADTH

Checking in on the new high lists, below is a look at 6-month highs and lows with a 15-day average for each. We can clearly see the declining trend in the new high list, falling under 5% last week just as the SPX was making a new high. But what stands out even more to me is in the bottom panel. The number of stocks making new 6-month lows is expanding. The 15-day average has been rising and made a multi-month high last week.

EQUITIES - OUTPERFORMANCE - 1

We didn't get any days last week with more than half of stocks outpacing the Index. Thursday and Friday were the strongest at just above 40%.

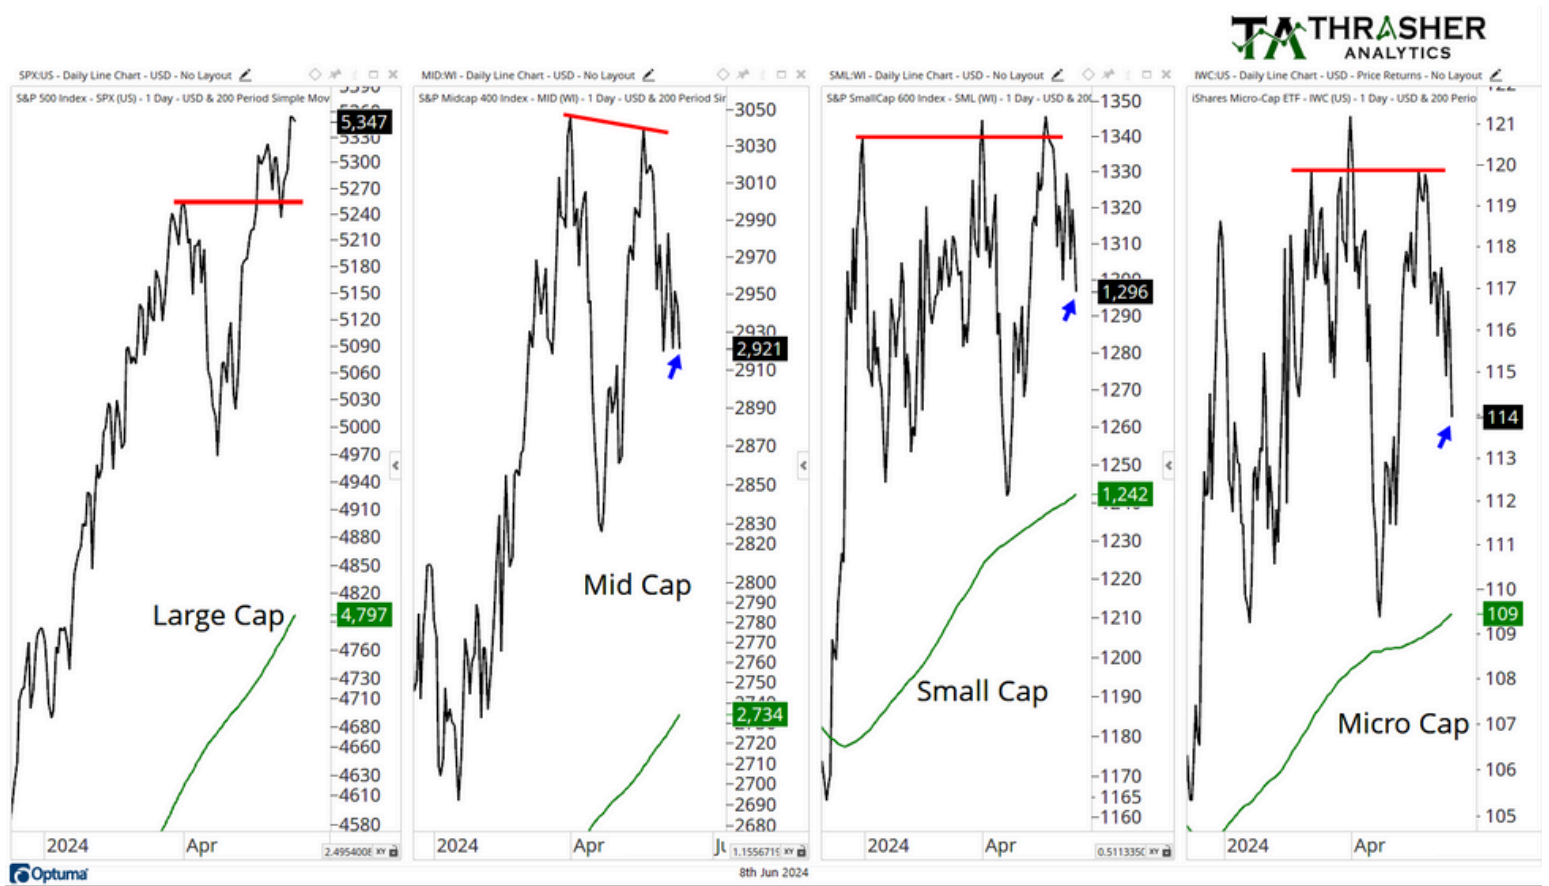

Here's an update to a chart I last shared when I was looking for a pop in relative performance of equal weight stocks earlier this year. This looks at the 20-day average of the prior page's chart of stocks outperforming. When the 20-day average gets extremely low, we often see a bounce of varying length and degree in the ratio of RSP vs. SPY. earlier in '24 we had a few weeks of strength in RSP before the mega caps once again took over and sent the ratio back to new lows. This indicator is now back below the level we had previously, matched just by May '23 and Sept. '20.

EQUITIES - ASSET SIZE

While the large cap index edged up to another new high last week, how was the rest of the market doing? Not great. In fact, we have lower-lows in small and micro caps and a near-lower low in mid caps. Right now, the only area of the equity market that's getting any kind of love are the mega caps.

EQUITIES - SECTOR SENTIMENT

The Offense-Defense Sentiment Spread stayed low last week, remaining negative. Both Offense and Defense groups moved lower.

ETF FUND FLOW

Below is a table with fund flow data through Thursday of last week.

Daily - ETF Flows - Fund Flows Layout

Name	Ticker	Net Flows YTD	Net Flows 1 Month	Net Flows 3 Month	1 Month Flow % of AUM
