Brief Summary:

Spoiler alert, more bearish charts in this week's Thrasher Analytics letter. It's not that I look for these, it's just what I see when I do my extensive review of the market and pull the most compelling and what I believe are the most important charts and data points to you each week.

We now are in a market that not only has stocks not able to keep above key moving averages that help identify up trends, but those moving averages are now turning lower. Not since 2000 have we had the S&P 500 hit a new high with most stocks under the 50-MA AND most 50-MAs declining. I'm also noticing a rising number of stocks making new lows, over 5% hit a 6-month low on Friday. There's also a growing number of stocks down double digits. Just under 50% of large cap stocks are in a -10% drawdown.

All these bearish breadth charts and lack of expanding leadership or even rotating leadership help identify a market environment, but they do not provide timing accuracy. Similar to 2021, I turned bearish several months before the final peak. I was very vocal about it publicly and in this letter but was also able to be more timely in the calling of when the dam finally broke, and the downturn started. We haven't gotten to that point yet, but we still must identify the environment the market currently is in, and it's not a healthy one.

This week the market will get a look at Q2 earnings with banks starting to report on Fri. Also, Powell testifies before Congress on Tues. and Weds. and we get inflation data on Thurs. with June CPI.

VOLATILITY: VRT

VIX remains under its 20-week MA and 13 but did produce another VRT signal.

CBOE S&P 500 Volatility Index - VIX (US) - Daily Line Chart - USD - No Layout

VOLATILITY: TOP & ENVIRONMENT

VIX remains in a Low Volatility Environment regime, but we do have a VRT signal shown by the black arrow.

VOLATILITY - CURVE

Curve remains in contango.

Daily - Watchlist - No Layout

VOLATILITY - SEASONALITY

Seasonality for the VIX can be tough to review, as it can spike really anytime of the year and that can throw off seasonal trends. However, there is some degree of a seasonal pattern for volatility and since 2003 it's often seen a low in the following two weeks. Note the black dot in the top panel, and how the green bars bottom in the coming weeks. We can also see in the bottom panel that VIX has typically been week in the next weeks and then see a pattern of positive advances in the following seven weeks through August. This of course isn't a requirement but shows us the historical roadmap VIX has taken over the last 20 years.

Please be sure to check out the Maestro Model Summary PDF in the Archive on the website.

Maestro Model remains at +6.

MAESTRO MODEL - CATEGORIES

Trend/Momentum fell two points and Breadth rose 1 point.

SENTIMENT SCORE

Tech had a strong sentiment week, rising 0.13 to 0.52. XLI did receive a bullish sentiment divergence signal this week.

RISK APPETITE RATIO

Below is a table of 16 gauges of risk appetite such as offense vs. defense sectors, foreign markets vs. domestic, small vs. large cap, lumber vs gold, high beta vs. broad market, high yield debt vs. Treasury debt, etc. The table shows each ratio's 1-year percentile going back the last 35 trading days. As the data improves, it turns green and as it declines it becomes red.

The average Risk Appetite Ratio percentile is at the 52nd percentile.

Risk Metric	-35	-34	-33	-32	-31	-30	-29	-28	-27	-26	-25	-24	-23	-22	-21	-20	-19	-18	-17	-16	-15	-14	-13	-12	-11	-10	-9	-8	-7	-6	-5	-4	-3	-2	-1	Current

Nasdaq 100 % New 6 month lows	0.0	5.0	10.9	3.0	8.9	3.0	1.0	1.0

EQUITIES - S&P 500 DAILY

Very strong price action in the final three days of the week with the Index closing at or very near the high each day. The gain was heavily reliant on the Mag 7. For instance, on Friday Apple, Facebook, and Microsoft alone made up 67% of the 0.58% gain in the S&P 500 with most stocks failing to advance.

EQUITIES - BREADTH THRUSTS

I've added an add'l section of the breadth thrust composite chart, titled Primary Long-Term Thrusts. These are the handful of thrusts that are in the original composite that have the best track record and only have the highest bar to clear to signal. The original composite is still what 'feeds' the breadth category of the Maestro Model.

Thrust count is at 0.

EQUITIES - RISING 50MA

I've written several times about the lack of stocks keeping up with their moving averages. Noting the fall in the long-term % above 200-day MA (which currently sits near the lowest level of the year). But not only are most stocks trading under their intermediate average with just 43.7% above the 50-day moving average - most of those moving averages have begun turning lower. The chart below shows when the SPX hits a new 1-year high but most stocks are under the 50-MA and that MA is declining. This doesn't happen often. Actually, it's happened just one other time, a few weeks before the market peak in 2000. That's just how rare the market data we are seeing right now is.

EQUITIES - RISING 6-MONTH LOWS

Last week I discussed how the number of 6-month highs has been falling. It's not just that most stocks aren't hitting new highs, the number of stocks making 6-month lows is rising. On Friday, it hit 5.4%. It's very rare for the Index to make a new high with more than 5% of stocks at a 6-month low. We last saw it just before the peak in 2022 with 6% at a 6-month low. Before the Feb. peak in 2018 it was 5.8% and also 5.8% just before the Q4 2017 melt up. Then we'd have to go back to 1998 and 1999 to find this type of breadth deterioration again.

EQUITIES - NASDAQ NEW LOWS

Jason Goepfert at SentimenTrader shared the following chart on Twitter/X. It shows that for Nasdaq Composite stocks, more than 3% are hitting new lows as the Index hits a high. We have now eclipsed the number of days this has happened since the 2020 and 2000.

The Composite keeps hitting new highs with many stocks falling to new lows

Source: Nasdaq

EQUITIES - DOWN -10%

Continuing on the topic of stocks are increasingly declining by a material amount, the chart below shows just how many are down -10% from a 6-month high. Almost half. 44% to be exact are already down double digits with the Index at a high. The blue arrows on the chart show when this data has begun trending higher, the 50-day MA being above the 200-day MA at a new SPX high. It happened a cluster of times at the 2022 peak, before the melt up at the end of 2017, the 2015 peak, and the 2007 peak. This isn't a screaming bullish sign of a healthy market.

Here again we can see the trends of the cap weight, Mag 7, and equal weigh S&P 500. The Mag 7 continues to rip higher, dragging the SPX with it. Meanwhile, the equal weight index peaked several months ago.

EQUITIES - SECTOR CORRELATION

Here's a look at how sectors are correlating to the broad market. Typically, most have a fairly strong correlation to the S&P 500 but over the last 3 months the average correlation has dropped under 0.5. Blue arrows show when this has happened in the past. Several notable periods stand out, 2015, 2007 and 2000 specifically as well as several other periods that saw either minor pullbacks or ignored entirely (2017).

EQUITIES - SECTOR SENTIMENT

The Offense-Defense Sentiment Spread rose back above 0 last week but finished at 0 on Friday.

ETF FUND FLOW

Below is a table with fund flow data through Thursday of last week.

Daily - ETF Flows - Fund Flows Layout

Name	Ticker	Net Flows YTD	Net Flows 1 Month	Net Flows 3 Month	1 Month Flow % of AUM
- Bond ETFs
